Struggling with ServiceNow testing?

LEAPWORK is the only solution for automating ServiceNow tests that everyone can use

Every time a new version of ServiceNow is released, upgrade panic kicks in at enterprises around the world. IT Service teams, Customer Support departments, and others begin to worry: Will our ServiceNow-based applications and processes break with the new version?

Testing too little, too late

To test ServiceNow, the same processes must be verified again and again. The problem is, testing ServiceNow, especially heavily customized applications, is a real time sink and drains departments of valuable resources. Without an army of testers at hand, enterprises often have to rely on developers and specialists in business functions to click and type through a long list of test cases. This approach steals time away from business-critical, sometimes customer-facing, functions. And even then, testing this way is only covering a fraction of all the scenarios you would want to cover to ensure in-depth quality assurance of your ServiceNow application.

> I demonstrated LEAPWORK to one of my colleagues, and his face just lightened up. The possibilities for ServiceNow automation are endless.
>
> **Dean Simonsen, IT Process Manager, major energy and utility company**

Automate ServiceNow with LEAPWORK

With LEAPWORK, your entire team can automate ServiceNow

Reduce dependency on developers when upgrading and save significant time during sprints.

Build reliable automation flows

Design robust tests for even highly customized applications with intelligent UI automation powered by Selenium.

Document every process

Automated tests and processes are documented with video and logs. All actions and events are recorded in audit trails.

Automate with one platform

Build robots visually for all software automation needs: Test automation, application monitoring, RPA, and more.

Get help when needed

Our skilled automation specialists are available on-demand for live support. Articles and tutorials are freely available.

What LEAPWORK users achieve:

Testers and process owners are rapidly automating test cases for continuous and scheduled execution.

2x faster
test case design

Design automated tests 2x faster compared to Selenium-coding.

20 mins
of regression testing

Reduce test execution time from 8 hours to 20 mins.

3x
release frequency increase

Release system upgrades 3x as often – no additional staffing required.

Automate ServiceNow with LEAPWORK

Out-of-the-box automation

Start automating with LEAPWORK's standard components covering common ServiceNow processes, like:

- **Starting application**
- **Logging in**
- **Clicking menu items**
- **Impersonating users**
- **Filling out forms**
- **And much more**

Integrate with your CI/CD pipeline

With its multiple integration points, the ServiceNow platform ties business operations together. LEAPWORK comes with a fully documented REST API, native plugins for most common DevOps tools and pipeline orchestrators. You can even build your own custom integrations with third-party systems.

Bamboo   mongoDB.   TestRail

Sauce Labs

TeamCity   HPQC   TFS   Jenkins

BrowserStack
